ASX Announcement

ETHERSTACK PLC [ASX:ESK] ("Etherstack" or the "Company")

Cisco US Incorporates Etherstack LTE Smartphone Technology

Cisco (NASDAQ:CSCO) today announced a range of new interoperable communications capabilities for their public safety, enterprise, utilities and transportation offerings that incorporate Etherstack's LTE25 smartphone technology.

The Cisco and Etherstack solution allows secure push-to-talk style operation between 3G and 4G handset devices and government radio systems such as those used by police, fire, ambulance and other government agencies. The offering also provides a similar capability to the utility, transportation and mining sectors.

Cisco and Etherstack have been collaborating on standards based interoperability solutions since 2008 which has recently seen the initial deployments of Cisco's new IPICS (IP Interoperability and Collaboration System) product incorporating Etherstack's wireless interfacing technology to various government agencies in the United States, Australia and New Zealand.

Both the US and Australian governments have standardised on a digital wireless communications standard known as APCO P25 for emergency services communications and new digital radio networks for public safety and other industries are currently being built out based on this technology.

Etherstack is the world's leading licensor of APCO P25 wireless technologies which over a dozen international manufacturers have licensed from Etherstack to incorporate into their product lines.

Etherstack's LTE25 technology provides secure end-to-end encrypted calls between commercial 3G & 4G handsets to private digital radio networks operated by government agencies and industry. Etherstack's solutions solve key migration issues from legacy analogue networks to digital radio networks and broadband wireless networks such as LTE networks.

Cisco stated that shipments will be ready in their Q2 2013.

Further details of Cisco's announcement can be found at newsroom.cisco.com

About Etherstack plc (ASX:ESK):

Etherstack is a wireless technology company specialising in licensing mission critical radio technologies to equipment manufacturers and network operators around the globe. With a particular focus in the public safety, defence, utilities, transportation and resource sectors, Etherstack's technology can be found in radio communications equipment used in the most demanding situations. The company has R&D facilities in London, Sydney, New York, Yokohama, Barcelona, Berlin and Singapore.
